Richieri-Costa syndrome is an autosomal recessive disease characterized by ichthyosis and endocrinological abnormalities. A parturient with Richieri-Costa syndrome is reported. A 35-year-old primipara with Richieri-Costa syndrome was admitted to our hospital for a caesarean section. The patient complained of palpitations, sweating and edema in the legs before labor, and developed ichthyosiform erythroderma and hypothyroidism after the first stage of labor. The patient had a spontaneous vaginal delivery without any complications. The condition of the neonate was normal. She was transferred to the recovery room, and her heart rate was 150 bpm with mild edema in the legs. She received epidural anesthesia for a caesarean section. We managed to block the autonomic nerves and systemic and epidural anesthetics simultaneously using xylocaine and bupivacaine, to avoid an excess load of anesthetics. The patient's hemodynamic state was stable throughout the procedure, and the infant's condition was also normal. The clinical course after labor showed rapid improvement of ichthyosis and thyroid dysfunction. An anesthesiologist should pay attention to Richieri-Costa syndrome, and avoid an excess load of anesthetics and systemic and epidural anesthetics during the procedure.Paul Clapham Paul Anthony Clapham (born 28 April 1966) is a South African lawyer, Constitutional Court judge, and current Deputy President of the Court.
