Muva two-wheel balancing machines are widely known in prior art. They can be used to measure and correct asymmetries and interferences of the vehicle wheels, both in a rotating or static manner. They may be used to measure and correct asymmetries and interferences of the vehicle axle, they may be used for the detection of the so-called differential pressure of the vehicle wheel, and they may also be used to perform a variety of other types of measurements. In order to perform such measurements, there are known machines which use laser light or gamma radiation to determine the wheel d0c515b9f4
