Modern science denies the efficacy of homeopathy and any other form of medicine based on the same principles of cause and effect as organic medicine. Those who teach modern science contend that the homoeopathic approach is based on outdated principles that conflict with scientific knowledge. Yet, modern medicine, far from being the cure-

Books and literature, two words that don't often go together, but a list of good books should be at the top of your list. Early influences were the popular writings of William Cullen, (1712-1790), the versatile writer on all aspects of medicine, whose Works of Nature (1747) had a vast readership in the English-speaking world. The classic work of Mark Young (1757-1813) had many admirers in England, and was reprinted several times, and translated into other languages. Thomas Beddoes, the physician, chemist, and writer, (1760-1809), propounded the doctrine of a vital principle in medicine, and devoured an enormous amount of literature in the pursuit of material. His posthumous publication of a medical diary had a great influence on the medical profession in the early years of the 19th century. Thomas Sydenham, the famous physician of the 17th century, had some of the English art of medicine; Charles Mayo was the first who applied his notions to clinical practice, and William Harvey, the discoverer of the circulation of the blood, was a pioneer in homeopathic research, and conducted experiments on animals. The studies of Maier, Koch, Perna, Thomas (1700-1771) and others of the 18th century also gave birth to the importance of microscopy, which was to a large extent the subject of the first scientific bacteriology. One other thread in the development of homoeopathy was the influence of Bernadotte Perrin (1801-1855), the pioneer of dry therapy, which had a wide influence in Europe and America. This newer path of homoeopathic treatment was begun in London in 1835 by a doctor named Edward Blackwell. Perrin, however, was not so eager to give up the use of mineral water. He drew up a scheme for the treatment of the patient with a variety of food, but in that period of time it was difficult to obtain mineral water in large quantities. The system of homoeopathy had not yet been defined in its most detailed characteristics. The name used by the pioneers was homöopathy. An English doctor and writer, William Boericke (1767-1837), at first ran a clinic from his house in London, where he applied some of the principles of homoeopathy, the study of which was rapidly progressing. After his death, the clinic was continued by Dr. T. K. Chambers, until, in 1846, the Royal Homöopathic Society for London was formed, of which the late Dr. Graves was the first President.
