Become Pope and rid the Vatican of the threats against the Christian world! Defend yourself against demons, exorcise hapless souls, and complete your holy mission – all while avoiding the papal sex scandal! “The controls are very precise, and the way the game is presented makes the player feel as if he’s playing a role in a famous film. It’s a real-time combat game, with action sequences in which the player can pull off an incredibly high variety of miracles and actions to interact with a variety of demonic entities, and it’s a really absorbing experience, though of course, not without its flaws.” 9/10 – GameCrate Additional Info

The Game is an upgrade to the original 2012 title, with the previously-released DLC now available as part of the base game. Tuesday, December 23, 2017 We’ve heard it before. A game about raising a kitty, right? “What’s the big deal? It’s just a cat!” Wrong. This is a game about an out of control cat that kills a farmer and his wife while the game is running. Wednesday, December 17, 2017 The genre that adapts super-powered beings and robots into real world villains you fight is the action genre, the one where the only rule is the fight is fair and the only damage are the ones inflicted by the player, so we see a lot of games in the genre where the action is extreme; you defeat your enemies using bullets, rockets, lasers and maybe even larger energy attacks; you can’t kill the enemy, just reduce his health to 0 and start the fight over again. These games usually combine survival gameplay with the good old story of saving the world, so you can also see quite a few games about the hero defeating the end of the world using the same scenario. On the other hand, we have the revenge genre, the genre where the heroes get back at the villains and the game is all about how the protagonist punishes the enemies and the moment it is over, the enemies become the villains. All the power is left to the player and nothing is done in the game. There is also the old school adventure genre, where the heroes are just plain human and can only use physical force to find their objectives. These games are the ones that are usually played by children. The Errant Scythe The genre that combines the worst of both worlds is

Orbital Gear is a metroidvania-style physics-based platformer. You play as a grown-up Junior Grade, a hero who set out to save his home planet of Asimov from impending destruction. You play in a 3D environment, where you move around using a mixture of the keyboard and mouse and various gravitational mechanics to traverse the world. In space you can simply move around using a simple movement system. Your weapons are used to destroy or set traps in order to progress through the game. Your aim is to eliminate all the enemies, explore the world, and solve the many challenges it throws at you. As you progress you get access to new weapons, new enemies, new bosses, and new mechanics to help you on your journey. Main FeaturesThe game plays out like a sci-fi action platformer. As you progress through the game you are tasked with collecting orbs. Collecting the orbs can allow you to unlock things like weapons, traps and new environments. There are also score bonuses, speed bonuses, and items that may help in battle. The environment is procedurally generated, meaning that it changes a lot. The art style is inspired by both the movies Gremlins and Gattaca. Tecmo Koei had already been working on a 2D Project involving a Gattaca styled world. With Orbital Gear they decided to add their 3D rendering technology to the mix and the results are remarkable. It adds a great depth to the game, giving a more well defined and realistic art style. The game is a mix of action and platforming. It is not a jump and run game, but neither does it lack that element. You need to carefully pick your approach to each battle, think about the enemies you are up against and make sure you get all the orbs you need. You will get annoyed by enemies, however, they are not too hard to defeat. There are a lot of weapons in the game, and the game can get pretty difficult and frustrating. The game also boasts a very well tuned control scheme that works seamlessly and without any problems. The camera can be re-positioned to an extent, but not at the expense of accuracy. There is no need to aim for this game, as the targetting system works well, and there are few issues with hit detection. You can also use the mouse to throw things, use them to create traps and even grapple to climb things. There are no

* the free version features 100 free levels but currently stopped Can you explore and compete? You and all your friends can compete together to see who will be the first to get to the final treasure! Or just explore together and share the challenges! Your adventure gets better! Play your way! After the first 100 free levels, buy keys to unlock extra content! Grab a friend, get a free key or jump on this epic adventure! I love the idea, I’ve played a few of their other titles. Seems quite similar to SteamWorld Dig 2 in a way which I like. The one thing that you could do to bring more light to this game would be to release it sooner, preferably to be beta and then for launch. It would be interesting if it was done like Brave Frontier or Super Sayajin, where it was randomly selected as a beta and you had to pay to unlock it. Also something about how the game glitched itself, such as not being able to use a wand in a town. The game feels really short if you’re expecting to play it long term. I don’t have any interest in making a game like this but I’d also suggest they show off the game mechanics and polish it up to at least the level of Crater Lake. Okay, I am going to enter the somewhat obnoxious side of this argument, but you see where it is going. The way this entire game is designed and presented is that the player bases their character on a player that has their own tomb. I think the whole premise of a MMO tomb romp sounds very cool, and I think that it should have been the basis of the game. The article states that there will be 100 free levels, and most of the free levels are simple bumpy grounds that would not give players a hint of how to move forward. There is no tutorial, there is no guide, and the game only has the bare minimum of commands. There are no collectibles or any way to track things in the game, there is no way to know how to keep track of things. The whole concept of having a character is only there so that you can explore other people's tombs, which makes little sense because you don't know the other people in your area other than their character. It is just the basic premise of someone creating a tomb and then competing against other people to try and get all the treasure in the tomb. However, that is not
